

Claim Management System Application

I tried to make the generic system that will be supposed on any claims, complaint and ticketing request by follow the BYD Organization Hierarchy from the Microsoft Entra Graph API. Currently, it's working on my local machine. But sooner, it will be moved to the test environment.

I am attaching the screen shots of the system that will help to understand the behavior of the system.

1. Integrated Microsoft Graph API. (Whole Organization Wide)
2. This is the Designation title's screen that consists of the basis of Department.

It will generate the email along the attached documents and the claim review link to the sequentially approver. Once the 1st approver has been approved the email will be sent to the next approved, then in last it will be sent to finance. This is how the approval matrix chain behaves which will be configured on the approval matrix journey.

On clicking on Review Claim It will redirect to here where the approver can approve and reject the claims.
